Introduction

1. Scope

1.1 Abstract

This document is a registry of the IBM Traditional Chinese *Graphic Character Set*, and the related *code* pages.

Note: “Traditional Chinese” will be abbreviated to “CH-T” hereinafter.

1.2 Objective

The objectives of this document are:

- 1) to specify a repertoire of the IBM CH-T *Graphic Character Set*
- 2) to specify *code page*, *DBCS-Host*, where each *graphic character* of the IBM CH-T *Graphic Character Set* is assigned a *code point*
- 3) to assign required *GCSIDs* and *CPGIDs*
- 4) to specify *code* translation correspondences between *DBCS-Host* and IBM Big-5

Note: Terms in italics (except headings) are defined in the Supplementary Information section.

1.3 Application

This specification is applicable to all IBM *products* which implement the IBM CH-T *Graphic Character Set* specified in this specification and which are announced or released to production (whichever occurs first) after date of publication. Implementation of the *coded graphic character sets* in this specification is defined in C-S 3-3220-019.

1.4 Effective Date

This document takes effect with its publication.

2. Document Administration

2.1 Originating Area and Responsibility

This document is maintained by the Standards Project Authority (SPA) for:

SIRS Code:	029 (Double-Byte Character Set (DBCS))
Location Code:	93K
Division:	AP
SCRL Group:	None
Page Count:	493

2.2 Authorization

Publication of this document was approved by the

Standards Authorities of the affected operating units.

2.3 Compliance

Compliance with the requirements of this document is recommended unless it is called out as a requirement in a standard or equivalent document. It then assumes the same compliance requirements as that document.

3. Related Documents

3.1 Superseded Documents

C-H 3-3220-126 dated 1999-04.

Note: For changes from the previous edition, see Section 10 “Change on IBM Traditional Chinese Graphic Character Set (C-H 3-3220-126 1999-04 to 2016-04).”

Requirements

4. External Standards

4.1 ISO/IEC 10646

ISO/IEC 10646 ("ISO 10646" hereinafter) specifies the *Universal Multiple-Octet Coded Character Set (UCS)*. ISO 10646 had been initially published in 1991, and then it has continued to be enhanced. In the latest version of ISO 10646, approximately 110,000 characters are defined, and 90,000 characters out of them are originated from the character sets used in AP CJK regions. They are mainly CJK ideographic characters ("hanzi" in Chinese, "hanja" in Korean and "Kanji" in Japanese). All characters from major coded character set standards in AP CJK regions, such as GB 2312 (for PRC), CNS 11643 plane 1 and 2 (for Taiwan), HKSCS (for Hong Kong), KS X 1001 (for Korea) and JIS X 0208, 0213 (for Japan) are already included. ISO 10646 also specifies the variation selectors which are used to indicate a specific variant form of CJK ideographic characters.

4.2 CNS 11643

The CNS (Chinese National Standard) 11643 character set standard was published by the National Bureau of Standards of Taiwan in 1986 and was updated in 1992. It was also called "Standard Interchange Code for Generally-used Chinese Character" (SICGCC). CNS 11643 provides 17 character planes for defining Chinese characters. Each character plane is divided into 94 rows and each row has 94 columns. Altogether, a total number of 8,836 characters can be accommodated in each plane. In total of 17 planes, 107,180 characters are allocated as of March, 2016. Out of these characters, 58,020 characters are defined in the CJK ideograph block in plane 00 (Basic Multilingual Plane, BMP) and plane 02 (Supplementary Ideographic Plane, SIP) of ISO 10646.

4.3 De facto Standard Big-5

Several computer vendors and the Institute for Information Industry (III) in Taiwan have offered so called "BIG-5 Code" in order to promote Big five Chinese software applications" since 1984. The "BIG-5 Code" has become the most popular internal code in the personal computer/system industry Taiwan. "BIG-5 Code" was designed to support the CNS 11643-1986 character set and to follow the character sequence of CNS 11643-1986.

4.4 Relationship of the IBM CH-T Character Set with ISO

10646 and CNS 11643

4.4.1 Character Coverage. The IBM CH-T *Graphic Character set* contains some of the symbols in ISO 10646 and the following CJK ideographs.

- 18,868 CJK Unified Ideographs
- 3,072 CJK Unified Ideograph Extension-A
- 4,902 CJK Unified Ideograph Extension-B
- 653 CJK Unified Ideograph Extension-C
- 1 CJK Unified Ideograph Extension-D
- 3 CJK Compatibility Ideographs
- 109 CJK Compatibility Ideographs supplement

It contains all of CNS 11643 plane 1, 2 and 3 characters, and some characters from plane 4 through 7 that are selected based on the frequency of usage.

It also contains the characters for the placeholder of 3 Variation Selectors, from U+FE00 to U+FE02 in ISO 10646, which is called "EBCDIC Variation Indicators".

4.4.2 Sequence of Arrangement

4.4.2.1 Symbols. Symbols are sequenced logically within each category whenever possible (that is, for Greek, Alphabet, Numerics, etc.). For the symbols in CNS 11643, no attempt was made to sequence the categories according to CNS 11643, because some IBM CH-T Symbols already follow the IBM Japanese Symbols sequence. (See C-H 3-3220-024 *IBM Japanese Graphic Character Set, Kanji*). For the symbols in ISO 10646, they are sequenced following each standard.

4.4.2.2 Primary Chinese Characters. These characters are sequenced generally by total stroke, but there are several characters that are different from CNS 11643.

CNS 11643 has the correct total stroke sequence, but we cannot follow the CNS 11643 sequence because it will cause *code point* changes for many of the characters.

4.4.2.3 Secondary Chinese Characters. These characters are treated the same as the Primary Chinese characters.

4.4.2.4 UCS Characters. CJK ideographs in UCS are assigned in the sequence of ISO 10646.

4.5 Euro Sign

The Euro, the single European currency, has been introduced on the first of January 1999. The IBM CH-T *Graphic Character set* supports this currency.

IBM Traditional Chinese Graphic Character Set

DBCS – Host

5. Specification of Character Repertoire

5.1 Identification of Graphic Characters

This document specifies the repertoire of the CH-T DBCS-Host *graphic character sets*. Each *graphic character* of the repertoire is identified by a unique *Graphic Character Global ID (GCGID)* or *Graphic Character UCS Identifier (GCUID)*.

In CH-T *graphic character sets*, GCGIDs for Chinese take the form 'Tzzz0080', and those for *user definable characters* take the form 'Xzzz0080', following the specification of C-H 3-3220-055. GCGIDs of non-Chinese *graphic characters* refer to those registered in C-H 3-3220-055.

The GCUID format is for defining additional characters and sets of characters that (mostly) exist in UCS-4 and need to be used on IBM *code pages*. The format allows all current and future characters from UCS-2 and the sixteen additional planes from UCS-4 to be described. It also allows glyph variants not defined in UCS to be defined as well as allowing for the glyph variants of the unified Han area.

For those characters that exist in ISO 10646, the *graphic character* descriptive name specified in that standard is used as a description for the GCUID.

GCUIDs take the form C G PP RR CE, following the specification of C-H 3-3220-055.

- The C field contains "U" to indicate that this is a GCUID.
- The G field is used to specify glyph variants. In GCUID on this specification, this field is always "0".
- The PP field specifies the UCS-4 plane. This standard contains the characters from UCS-2 (PP=00) and second plane of the sixteen planes (PP=02).
- The RR field represents UCS row, and the CE field represents the UCS character cell.
- For characters not defined in UCS, the PP field specifies the private use planes allocated by IBM registration. For some composed characters in this specification,

U0FFyyyy is allocated. Note "yyyy" is four hex digit which is allocated by C-H 3-3220-055.

5.2 Algorithm of GCGID

zzz value for 'Izzz0080' and 'Xzzz0080' is calculated by the following algorithm:

- 1) Assign virtual *codes* starting with the first *code point* of *EBCDIC code range* sequentially to the *graphic character set* of the proper collating.
- 2) Convert both *bytes* of the *code* from hexadecimal to decimal.
- 3) Subtract 64 from both numbers.
- 4) Multiply the high-order number by 192 and add the low-order number to the result.
- 5) Convert the resulting number to a base 36 number, where the values from 0 through 35 are 0 through 9, followed by A through Z. (The conversion algorithm is essentially the same as would be used to convert from decimal to hexadecimal.) The resulting value will be a three digit value.

6. Character Sets and Code Pages

6.1 Registration of GCSGID and CPGID

This specification registers the revised IBM CH-T *Graphic Character Set* and identifies them by *Graphic Character Set Global Identifier (GCSGID)*.

It also specifies relevant *code page* for those registered *graphic character set; DBCS-Host*, and identifies them by *Code Page Global Identifier (CPGID)*.

Table 1 specifies the GCSGIDs and CPGID of the *registered coded graphic character sets* of the IBM CH-T.

The registration category "U" means "Unrestricted", which implies that *graphic character sets* and *code pages* in this category have potential broad implementation in information processing products.

Note: See C-H 3-3220-050 for the detail of registration categories of *graphic character sets* and *code pages*.

Table 1. Registration of GCSGID and CPGID for the IBM CH-T *Graphic Character Set*

6.2 Structure of CH-T DBCS-Host

The *coded graphic character set* of the CH-T DBCS-Host is structured as shown in Table 2 and Figure-1. The specifica-

tion of the CH-T DBCS-Host coded graphic character set is shown in Table 4 to Table 11.

Table 2. Structure of CH-T DBCS-Host

Area	Wards in Hex	Content	Number of Characters

9	FE * ¹ to FE * ¹	EBCDIC Variation Indicators	3

Notes:

*¹ A part of the ward is used for this character area.

*² 5 Katakana, 3 Hiragana and 5 Special symbols are added.

*³ 24 extended Bopomofo letters are added.

*⁴ Not all, but a selected subset of ideographs from CJK Unified Ideograph Extension A, B, C and D are included.

*⁵ CJK Unified Ideograph Extension A repertoire is scattered in Area 2, 4 and 6.

*⁶ CJK Unified Ideograph Extension B repertoire is scattered in Area 6 and 8.

*⁷ User-Definable Characters area is expanded for other 191 code points.

IBM Traditional Chinese Graphic Character Set

DBCS – Host

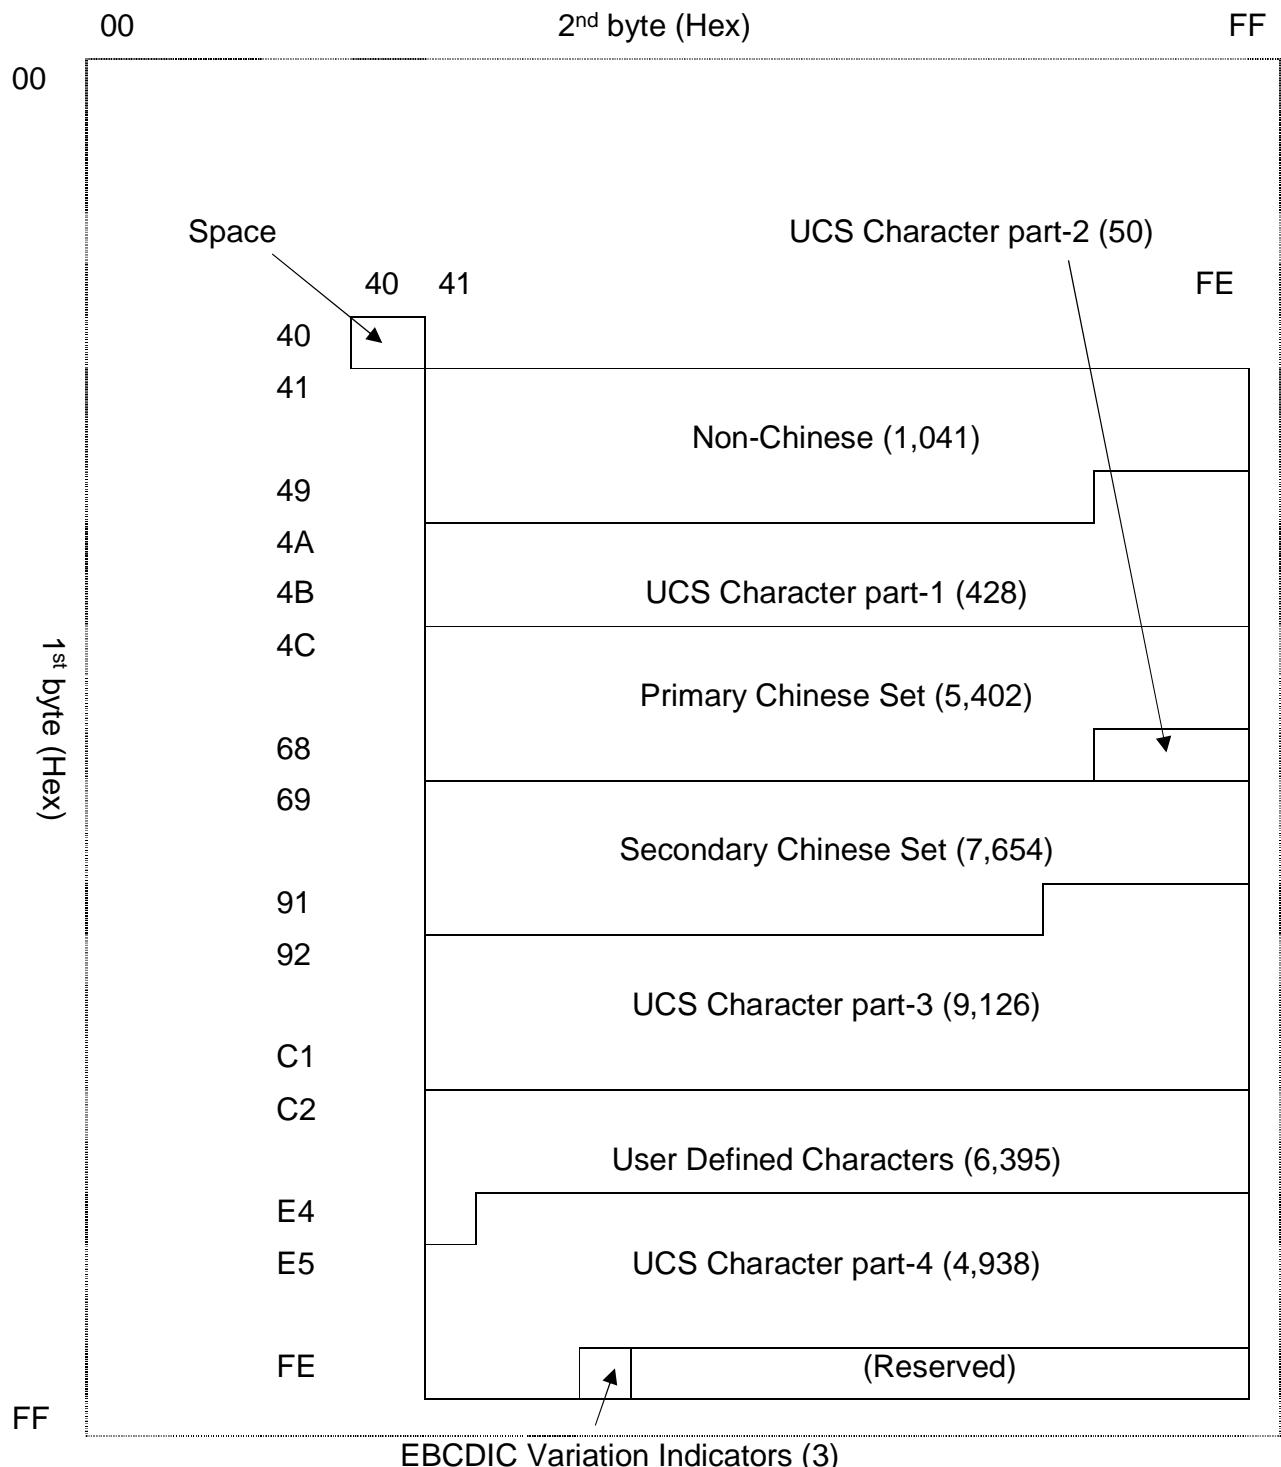

Figure 1. Code Structure for CH-T DBCS-Host (Overview)

IBM Traditional Chinese Graphic Character Set

DBCS – Host

7. Code Translation Correspondence

The *code* translation correspondence between *DBCS-Host* and IBM Big-5 is defined in this specification.

7.1 Code Translation Correspondence of Non-Chinese and Chinese Sets

In the *code* translation correspondences of non-Chinese and Chinese sets between DBCS-Host and IBM Big-5, the logical conversion is not applicable. All the *code* translation correspondences are, therefore, shown in the specification tables in Sections 8.2, 8.4 and 8.6. Some of these characters marked by * are not assigned in IBM Big-5. They are substituted in the *code* correspondence from DBCS-Host to IBM Big-5.

7.2 Code Translation Correspondence of User Definable Characters

For user definable characters, the code translation correspondence between DBCS-Host and IBM BIG-5 code is sequentially given from the code point of the source. Table conversion is required. The last 191 UDCs in DBCS-Host are substituted. The first code point of the DBCS-Host UDC area (X'6941') is mapped to the first code point of the IBM Big-5 UDC area (XF040'), and the mapping continues sequentially.

7.3 Code Translation Correspondence of UCS Characters Part-1 through Part-4

The characters of UCS Character Part-1 through Part-4 are not assigned in IBM Big-5. Therefore, they are substituted in the *code* correspondence from DBCS-Host to IBM Big-5.

8. DBCS-Host Specification

8.1 Format of DBCS-Host Specification Tables

In this section, the specification of the CH-T DBCS-Host *coded graphic character set* is provided by tables. They are formatted as illustrated in Table 3.

Column				
1	2	3	4	5
Graphic	Host Code (Hex)	Big-5 Code (Hex)	UCS-2 or UCS (Hex)	GCGID or GCUID
X	XXXX	XXXX	XXXX or XXXXX	XXXXXXXXXX

Note: UCS-2 or UCS (Hex) in column 4 is the *code* representations in ISO 10646. This specification does not define the *code* correspondence between UCS and others.

DBCS – Host

Supplementary Information

9. Definition of Terms

The following terms are defined for the purposes of this document.

9.1 Product

A hardware or software unit that is individually packaged, that is marketable, and to which a type number/program number or equivalence has been assigned.

9.2 Graphic Character

A graphic symbol character, such as a numeric, alphabetic, special or Kanji.

9.3 User Definable Character

A graphic character whose graphic shape is definable by users.

9.4 Universal Multiple-Octet Coded Character Set (UCS)

A graphic character set defined in ISO 10646

9.5 Graphic Character Global Identifier (GCGID)

An up to eight-character identifier assigned to each graphic character. See C-H 3-3220-055.

9.6 Graphic Character UCS Identifier (GCUID)

An eight-character identifier assigned to each graphic character that is defined based on UCS specification. For the character corresponding to UCS-2 character, it takes the form 'U000xxxx' (xxxx: UCS-2 code point). See C-H 3-3220-055.

9.7 Graphic Character Set

A set of graphic characters, treated as an entity.

9.8 Byte

A unit of string consisting of 8 bits.

9.9 Graphic Character Set Global Identifier (GCSGID)

A 5-digit decimal identifier assigned to a graphic character set. See C-H 3-3220-050.

9.10 Code

A system of bit-patterns to which specific graphic or control meanings have been assigned.

9.11 Code Point

One of the bit-patterns specified by a code.

9.12 Code Page

A specification of code points for each graphic character in a set, or in a collection of graphic character sets. Within a given code page, a code point can have only one specific meaning.

9.13 Registered Code Page

A code page that has been registered and assigned a CPGID.

9.14 Unrestricted Code Page

A registered code page that has been approved by all affected operating units, and has been placed in the category of "unrestricted".

9.15 Code Page Global Identifier (CPGID)

A 5-digit decimal identifier assigned to a code page. See C-H 3-3220-050.

9.16 Coded Graphic Character

A graphic character with its assigned code point.

9.17 Coded Graphic Character Set

A set of graphic characters with their assigned code points.

9.18 Registered Coded Graphic Character Set

A coded graphic character set, whose graphic character set and code page have both been registered.

9.19 Coded Graphic Character Set Global Identifier (CGCSGID)

A 10-digit decimal identifier consisting of the concatenation of a graphic character set global identifier (GCSGID) and a code page global identifier (CPGID). The CGCSGID is also represented as the concatenation of the hexadecimal representations of the GCSGID and CPGID. See C-H 3-3220-050.

9.20 EBCDIC

Abbreviation of Extended BCD Interchange Code which is defined in C-S 3-3220-002, EBCDIC.

9.21 DBCS

Abbreviation of a Double-Byte Character Set. It is a graphic character set in which each character is represented by two bytes. See C-S 3-3220-102 for detail.

9.22 DBCS-Host

A DBCS code page which is mainly used in conjunction with EBCDIC.

9.23 Ward

A section of a Double-Byte Character Set where the first bytes of all of the code points belonging to it are the same. A ward has a unique numerical value which represents the first byte of the code point belonging to that ward.

IBM Traditional Chinese Graphic Character Set

DBCS – Host

10. Change on IBM Traditional Chinese Graphic Character Set (C-H 3-3220-126 1999-04 to 2016-04)

10.1 Overall

IBM CH-T DBCS-Host on C-H 3-3220-126 2016-04 has the superset of DBCS-Host on C-H 3-3220-126 1999-04, as shown in Figure 2.

10.2 Character Coverage

IBM CH-T DBCS-Host on C-H 3-3220-126 2016-04 extends

- 14,542 Chinese characters

- 24 Bopomo
- 5 Katakana
- 3 Hiragana
- 5 Symbols
- 3 EBCDIC Variation Indicators
- 191 User Definable Characters

10.3 Code Translation Correspondence from C-H 3-3220-126 1999-04 to C-H 3-3220-126 2016-04

Since IBM CH-T DBCS-Host on C-H 3-3220-126 2016-04 has the superset of revision on C-H 3-3220-126 1999-04, no conversion required.

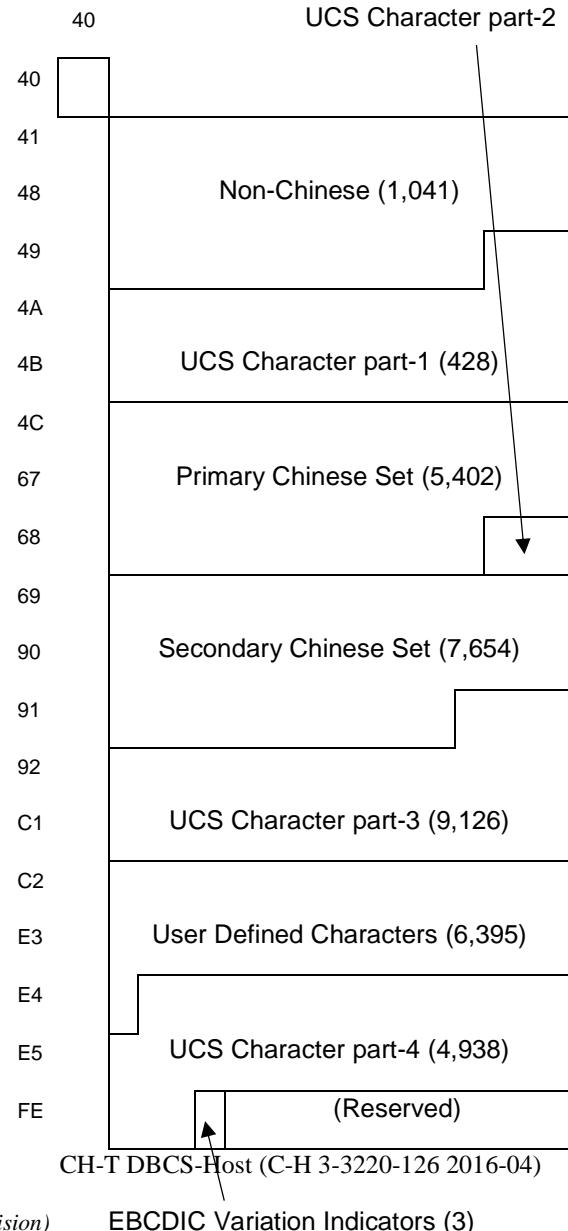

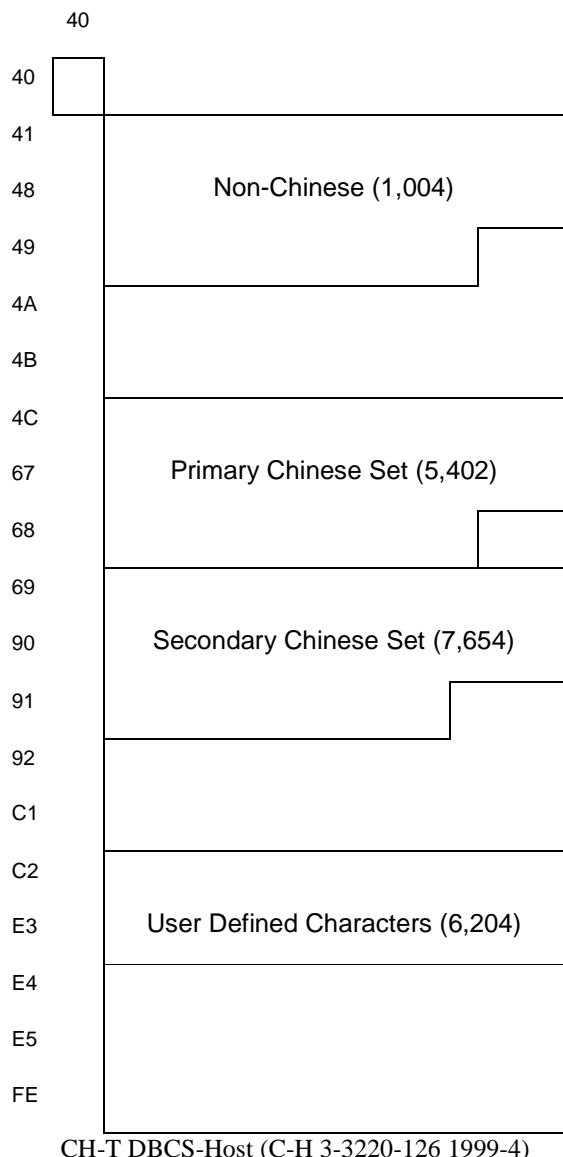

Figure 2. Change on CH-T DBCS-Host (1999-04 revision to 2016-04 revision)

EBCDIC Variation Indicators (3)

IBM Traditional Chinese Graphic Character Set

DBCS – Host

11. EBCDIC Variation Indicators (EVIs)

This specification assigns 3 EVIs from x'FE60' to x'FE62'. However, because there is the possibility to assign more EVIs for remained Unicode variation selectors, x'FE63' to x'FE6F' are reserved for more EVIs in the future revision of this specification.

12. Graphic Character Representation

This specification does not define actual glyph representation such as glyph image or the style of font design. On questions about the font design to be implemented, the Standards Project Authority for DBCS (SIRS 029) may be consulted.

IBM Traditional Chinese Graphic Character Set

DBCS – Host

8.2 Non-Chinese Set

Note

* Graphic images of these Host codes are represented in an Ideographic Description Sequence (IDS), because IBM World Type Fonts do not contain corresponding ideographic characters at the publication. See ISO/IEC 10646 for complete graphic image for these characters. Also, see Annex I of ISO/IEC 10646 for IDS. Some of IDSs contain “?” as the component. This is because it is too complicate to describe the corresponding component using the characters in this standard.

## IBM Traditional Chinese Graphic Character Set

### DBCS – Host

#### 8.9 EBCDIC Variation Indicators

Table 11. EBCDIC Variation Indicators				
Graphic	Host Code	Big-5 Code	UCS-2	GCUID
EVI-1	FE60	----	FE00	U000FE00
EVI-2	FE61	----	FE01	U000FE01
EVI-3	FE62	----	FE02	U000FE02

Note  
All characters on this table are “Non-spacing Combining Marks”. They do not have the graphic representation.  
Therefore, the graphic images on “Graphic” column are just to indicate their specifications. “EVI” stands for “EBCDIC Variation Indicator”.
